

Subject: Opposition to ERO 025-0694 – Proposed Removal of Protections and Transfer of Crown Lands in Wasaga Beach

To: Premier Ford and Ministers McCarthy and Rickman:

I am writing to express serious concern regarding the previously named ERO 025-0694, which removed protections from nearly one-third of Wasaga Beach Provincial Park, over 645 acres of vital wetlands, dunes, forests, and public beaches. These lands are not surplus. They are ecologically essential.

This area is both a cherished public space and critical habitat for endangered and threatened species such as the Piping Plover, Redside dace, Red-headed woodpecker, and Blanding's turtle. Legislative changes have already weakened Ontario's Endangered Species Act; this proposal risks further erosion of legal safeguards for species at risk.

The plan that removes Beach Areas 1, 2, New Wasaga, and Allenwood from the Provincial Parks and Conservation Reserves Act (PPCRA) dismantles protections for some of southern Ontario's last remaining coastal wetlands. These ecosystems regulate floodwaters, store carbon, and filter pollutants. Their loss would further undermine Ontario's already diminished climate targets.

The sale of Crown-owned lands to the Town of Wasaga Beach also disregards the fact that these lands are within the traditional territories of Beausoleil First Nation and the Métis Nation of Ontario. As such, no sale should proceed without free, prior, and informed consent in accordance with Section 35 of the *Constitution Act, 1982*. Crown lands are not municipal assets — they are held in trust for the public and for future generations.

The transfer of Nancy Island from PPCRA protection to the Heritage Places Act, under the Ministry of Tourism, Culture and Gaming, risks fragmenting the park system and weakening ecological protections. While heritage promotion is important, it must not come at the cost of ecological integrity.

Retaining Crown ownership of the lake and riverbed portions does little to mitigate the threat. Aquatic systems are interdependent with surrounding lands. Fragmenting or selling these parklands increases risks to water quality, biodiversity, and public access.

Despite widespread public concern over past attempts to develop protected lands, this pattern continues under the guise of "revitalization." These are not blank spaces for expansion; they are living systems that sustain biodiversity and climate resilience.

I urge the Ministry to revisit legislation to protect Wasaga Beach Provincial Park and the related wildlife species. It is essential to uphold Ontario's climate responsibilities, safeguard species at risk, and honour Indigenous rights.

Sincerely,
